

SecurWatch® Solution Brief

Monitor User Activity and Data Access to Keep Your Business Secure

Continuous monitoring of user and computer activity ensures your Data is protected and your Employees are safe in the Internet Connected Business.

Key Features

Managed Service delivers increased security capability and reduces overhead

Autonomous & comprehensive monitoring of your business computer activity with minimal time investment

Advanced Threat Detection

Through trend analysis and comparison it is possible to proactively identify activity anomalies prior to a security incident occurring.

24/7 Intelligent Alerts

Detailed notifications containing incident type and severity are communicated and scrutinized to establish a swift and effective route to manage security incidents.

The Increasing Risk of Data Theft & Computer Misuse

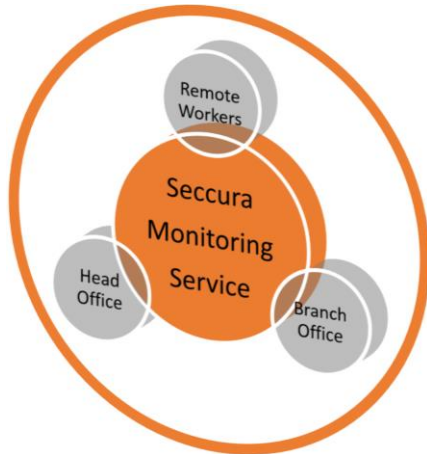

One of the greatest threats to the modern business originates from its own employees and their computer equipment. Unmonitored and poorly protected computers have led to a huge rise in I.T security incidents including the theft or accidental disclosure of sensitive data from UK businesses. Data “leaks” or a Data “breach” can be extremely damaging to a business; the impact of exposing company confidential information or customer related information can be beyond measure and it is important to note that these types of data security incident are now subject to enforcement fines by the Information Commissioners Office to a maximum of £500,000 per event.

Managed Computer Monitoring Service

Keeping a close watch on your IT systems for signs of malicious or potentially damaging activity is challenging, extremely time consuming and can be counterproductive if inexperienced. Just knowing what to look out for requires a significant level of knowledge in order to differentiate between actual security issues and normal user behaviour.

SecurWatch® is a Managed Service that constantly monitors computer and user activity against a set of predefined rules and policies designed to identify malicious and harmful activity within a computer environment. Our cloud based platform will recognise unusual activity and issue real-time alerts so a more detailed assessment of the incident can be carried out and allow appropriate measures to be taken.

- **Secure “Always On”** Cloud based monitoring system.
- **Policy based engine** Custom rules and policies tailored to your business needs identify threat & risk incidents.
- **Real time alerting** Notifications deliver incident detail allowing timely and informed decision making.
- **Ease of deployment** Low management overhead and low cost of ownership.
- **HR Intelligence** Advanced Reporting delivers detailed reports for Employee performance monitoring.

- Smart recording agent is installed on computers across your organisation.
- Monitoring service is configured and activated with rules and policies intelligence specific to your business and needs.
- Alerts are generated by the monitoring service and scrutinized for specific event type and severity classification.
- Instruction on security incident management is issued to control and limit damage to your operation.
- Periodical reporting provides ongoing status and analysis of businesswide computer and data monitoring.

Monitoring & Alerting Features

SeccurWatch® will monitor and record;

- Application activity
- Website visits
- Document access
- Internet Search
- Keystrokes
- Email usage
- Social media
- Internet chat
- User inactivity
- Screenshots

Alerts and notifications can be generated for almost any type of criteria specific user event, these can include precise conditions such as “keyword” detection or a predefined action taking place through to advanced detection of unusual or uncharacteristic user activity.

Summary

Protecting Data and Employees within a computer dependent business is a challenge that must be addressed businesswide. Written policies and standard procedures are no longer enough to ensure a consistent and effective approach to this problem. Persistent monitoring of data access and computer activity provides an effective method of addressing the issue and vastly reducing the associated risks. The **SeccurWatch®** service can deliver this capability to your business with greater expertise and at a reduced overhead. Deployment of **Seccurwatch®** will allow people and businesses to continue to operate in a flexible and productive manner whilst benefitting from an increased level of security.
